ENFLOREX®

Enrofloxacin 100 mg Oral Solution

PHARMACOLOGICAL PROPERTIES

The mechanism of action of enrofloxacin is based on inhibition of the activity of the enzyme DNA gyrase, which affects the replication of the DNA helix in the nucleus of a bacterial cell, which leads to disruption of protein synthesis and suppression of the growth of division and development of gram-positive and gram-negative bacteria.

INDICATIONS

Colibacteriosis, salmonellosis, streptococcosis, mycoplasmosis, necrotic enteritis and other infections associated with enrofloxacin-sensitive microorganisms

DOSAGE AND ADMINISTRATION

Cattle, sheep, goats and pigs: 1 ml/20 kg BW daily for 3-5 days
Poultry: 1 ml/20 kg of BW daily, added to drinking water

Slaughter of calves, lambs and piglets for meat: 14 days

Slaughter of chickens and turkeys for meat: 11 days
